DETAILED ACTION

1. Claims 1-5 are pending in the instant application.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Deswal et al., Circulation., Vol. 96, No. 8, October 21, 1997, page I-323, abstract 1802, and further in view of Swedberg et al., European Heart Journal, ages 136-139, January 1999.

Claims 1-5 are drawn to a method of treating chronic heart failure in a patient comprising administering by subcutaneous injection a dose of TNFR:Fc at 5 mg/m² or 12mg/m² per dose up to a maximum of 25 mg per dose at least two times per week for a time sufficient to induce a sustained improvement over baseline.

Deswal et al. teach administration of TNFR:Fc to patients with advanced heart failure, wherein the dose is a single intravenous administration of 1-4 mg/m², and wherein the improvements were maximal 7-14 days after administration.

Swedberg et al. teach administration of enalapril for six months on average, to patients with severe heart failure, wherein improvement was sustained for at least 4 years after treatment.

Application/Control Number: 09/936,509

Art Unit: 1646

It would have been *prima facie* obvious to the person of ordinary skill in the art at the time the invention was made to optimize the conditions of administration of TNFR:Fc to patients with chronic heart failure, since Deswal et al. teach improvement of patients with advanced heart failure with a single low dose of TNFR:Fc, and the clinical trial of Deswal et al. was a preliminary study. Swedberg et al. is cited as demonstrating that it is desirable that any improvements in patients with heart failure be sustained. The skilled artisan would be motivated to optimize treatment regimens since chronic heart failure is a major health problem, and there would be a reasonable expectation of success since Deswal et al. demonstrated improvements in a preliminary clinical trail with TNFR:Fc, and since TNFR:Fc has been successfully used as a therapeutic in other conditions where excess TNF is a factor, such as rheumatoid arthritis.

Conclusion

3. No claim is allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eileen B. O'Hara, whose telephone number is (571) 272-0878.

The examiner can normally be reached on Monday through Friday from 10:00 AM to 6:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Kunz can be reached at (571) 272-0887.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (571) 272-1600.
